

Harsh environments of protein processing require heavy duty pallet trucks

ENHANCE SANITATION EFFORTS WITH IMPERMEABLE MATERIALS

Use impermeable materials on all touch points, such as all composite and aluminum materials to help:

- Decrease trapping of bacteria or foreign agents that could cause contamination
- Reduce vapor transmission
- Allow for thorough surface sanitization of equipment through non-porous cells

SAFEGUARD WITH WASH- DOWN PACKAGES

- Galvanized steel protects against corrosive environments, eliminates chance of paint chips or flakes around raw materials and allows for frequent wash downs
- Cast aluminum control handle withstands abuse and prevents component exposure to moisture
- Food processing load wheels help to reduce damage caused by corrosive fluids
- Heavy-duty fork frame and linkage enhance durability

MAINTAIN INTEGRITY WITH FOOD-GRADE LUBRICANTS

Decrease your chances of contamination with food-grade lubricants that are formulated specifically for the safe use around food raw materials and products.

ACHIEVE CLEAN & PRODUCTIVE ENERGY WITH LITHIUM-ION

- Generates zero harmful emissions while in operation or charging
- No maintenance or chance of acid spills
- 2x longer lifespan than lead-acid and thin-plate pure lead, reducing replacements
- Charging flexibility eliminates need for redundant batteries
- Stable voltage reduces truck component wear

Bacteria, lead-acid spills and non-food grade lubricants can cause for product contamination throughout the manufacturing process.

Maintain raw material and product integrity with the Yale® MPB045VH walkie pallet truck – available with numerous options for a clean and healthy environment.

Wash-down packages
