

# Embrace the future of direct-store delivery

## DOUBLE THE IMPACT WITH ONE SMART SOLUTION

Introducing a revolutionary two-part DSD System from Yale<sup>®</sup>, designed to drive your direct-store delivery operation to new levels of productivity. This system includes the MDS12NLG DSD sled nested within the MDW33NLG DSD pallet truck.

This innovative design allows for efficient unloading of pallets from trailers, and the sled can be easily separated to replenish stock inside stores.

This system eliminates the need for down-stacking products and using handcars, streamlining the entire process and providing exceptional ergonomic comfort.

## DEFY CHALLENGING TERRAIN

The DSD System can improve efficiency by decreasing the time needed for each delivery, potentially allowing for more stops per shift. This enhancement may help to reduce fleet size, lower labor costs, and decrease manual handling by up to 50%.

Conquer challenging terrain while optimizing energy on the go

Attract and retain talent with game-changing ergonomic features

Enhance cost efficiency in distribution, loading, and direct-store delivery

This efficiency can help you meet peak demand and timely deliveries, which may enhance reliability and customer satisfaction.

## Schedule a demo with us

We would like to bring a demo experience directly to you. Please complete the form linked to the right, and your dedicated account team will get in touch soon.
